- *Naturally Beautiful Smiles*
- *Dental Implantology*
- *Sedation Comfort*

Dr. Stephen Matarazzo is one of Massachusetts leading dentists treating some of Boston and the South Shore's most discriminating clientele. Health conscious clients from all over seek out his services because of his extensive training, attention to detail, and artistic flair for creating naturally beautiful smiles.

Clients have been benefiting from Dr. Matarazzo's advanced dental care in his upscale practice since 1978. His areas of expertise are in **Complete Dental Restoration, Surgical Placement of Dental Implants and Aesthetic Smile Design.**

Dr. Matarazzo received his Bachelors of Science Degree from Boston College in 1974 and earned his Doctor of Dental Medicine degree from Tufts University School of Dental Medicine in 1978. Dr. Matarazzo has earned a **Fellowship Status with the International Congress of Oral Implantologists for the surgical placement of Dental Implants.** He is also an alumnus of the **Misch Surgical Institute in Detroit Michigan, and the famed Pankey Institute in Key Biscayne, Florida.** Dr. Matarazzo owes his passion Cosmetic and Restorative Dentistry to his extensive training with Dr. William Strupp, Dr. Carl Misch, and Dr. Charles Martin, all pioneers in the field.

His commitment is to provide his clients with the most advanced dental care available while offering a uniquely exceptional and satisfying experience, Dr. Matarazzo adds: "I am genuinely rewarded when someone thanks me for what I have done for them. I'm given the opportunity to change someone's life by giving them a beautiful healthy smile. That's incredibly satisfying."

The Art & Design of *A Beautiful Smile*

"Many of our patient's are from the baby boomer generation", says Dr. Matarazzo. "Often times, their teeth have darkened or yellowed, and show signs of wear and tear, cracking, or chipping. These obvious aging signs, combined with the unsightly look of dated dentistry result in smiles that lack vitality and are dull. An unattractive smile makes the entire face look older and less vibrant despite other beauty efforts".

Advanced cosmetic and restorative dentistry allows the exceptionally trained and skilled dentist to incorporate dramatic, aesthetic enhancements with the restoration of broken down, worn or missing teeth so as to create a more youthful and healthy white smile which will stay beautiful for years.

"Creating beautiful smiles is truly a fusion of advanced training, artistry, and expertise," exclaims Dr. Matarazzo. We thoroughly evaluate the shape, size and alignment of the teeth, gum tissue, and facial features of each smile makeover client we see". Older unattractive and failing

STOP Premature Aging ...with a DENTAL RESTORATIVE FACELIFT

ANNOUNCING THE NEW, NON-SURGICAL FACELIFT FOR DENTURE WEARERS

There are three types of dentures: Economy dentures, Traditional dentures, and now introducing Strickland Facelift Dentures. This amazing breakthrough provides underlying facial support which plumps your lips, lessens wrinkles, helps fill your face out, and provides for a better fit and appearance.

Patients absolutely love them, calling them the "fountain of youth" for denture wearers.

Why Strickland Facelift Dentures™

Strickland Facelift Dentures™ are the only denture that offers you the level of comfort, customization and confidence that you can get with a dental restoration. They are also the only type of denture that works to combat jaw bone resorption, the cause of the aged or "sunken in" facial appearance that occurs when we lose our teeth.

As an individual ages, their teeth wear or they may have lost one or more teeth resulting in a gradual "collapsing of the bite". Subsequently the proportions of the lower half of the face shorten or collapse. The lips flatten in the front and droop down in the corners with a puckering of the chin and a loss of volume to the mouth and face. These obvious aging signs often result in an overall appearance that is tired and prematurely aged.

A Dental Restorative Facelift involves the restoration of an individual's entire mouth due to the loss of one or more teeth or the gradual breakdown and wear of teeth over time. This treatment may involve any combination of: porcelain crowns, fixed porcelain bridgework, dental implants and cosmetic procedures. We provide each patient with their own specific treatment options tailored to suit their specific needs and desires.

Properly performed, dental reconstruction reverses decades of premature aging by reestablishing lost facial volume and lip support while enhancing ones overall health and well-being. Dr. Matarazzo states "Our patients are always amazed at how much

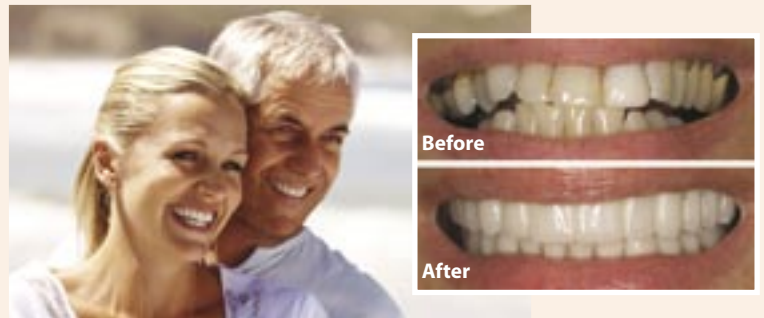

Unknown to most patients who experience tooth loss are the issues that occur as a result of not having teeth in the form of jawbone deterioration. The bone material that the tooth root is attached to is accustomed to physical stimulation that is produced by normal behaviors of biting and chewing. As long as natural teeth are in place and disease is absent, our upper and lower jaws can be expected to remain healthy and

intact. However the loss of our teeth and their former replacement – traditional dentures that are designed to rest on top of the gum tissue – do not provide direct stimulation to the jaw bone material and thus do nothing to combat the effects of jawbone resorption, resulting in patients who look much older than they actually are.

Strickland Facelift Dentures™ are designed to stimulate the jawbone by creating a better fitting denture that rests partially on the muscles. They are placed to build the bite at a position that the muscles will best function; the same position that provides the greatest facial support and works to achieve stability and greater facial aesthetics.

younger they look and feel after undergoing these procedures. They are so much healthier and they always look great."

Dental Implants:

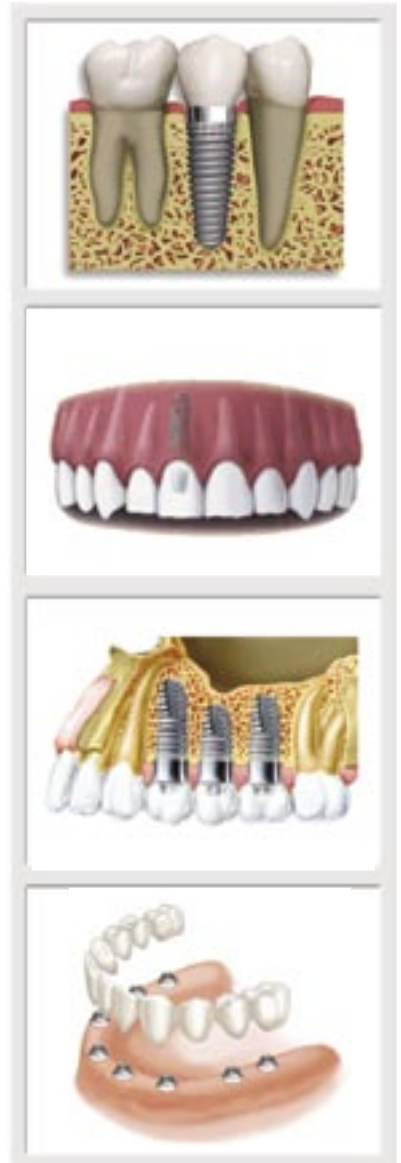

Are They Right For You?

Dental Implants are the strongest and most permanent option to replace one or more missing teeth. They're made of biocompatible materials similar to hip or knee replacement implants and are proven to have a 95% or more success rate when properly performed and care for. Very few forms of medical, orthopedic or dental treatment offers such high success rates.

Surgically placed below the gums, implants fuse to the jawbone serving as a firm and secure foundation for porcelain crowns, fixed porcelain bridgework or streamlined dentures that look, feel and function like natural teeth.

Benifits of Dental Implants:

- Dental Implants function and feel like natural teeth allowing you to eat and speak comfortably
- Dental Implants can be restored to look like natural teeth so that you can smile with confidence.
- Dental Implants help maintain the bone structure of the jaw and face preventing the premature aging process often associated with tooth and bone loss.
- Dental Implants firmly and securely support various forms of dentistry eliminating the need for loose bulky dentures or messy adhesives.
- Dental Implants will usually last a lifetime.

Dr. Matarazzo is one of very few dentists trained and skilled in both surgical placement & comprehensive restoration of dental implants.

Do You Avoid the Dentist?

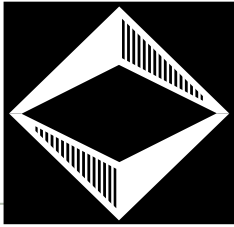

Relax with Mild Oral Sedation

- *Did you know 75% of all Americans experience feelings of worry and stress about going to the dentist?*
- *20% of Americans avoid going to the dentist because of anxiety or fear, leading to major dental problems and disease.*

If you've avoided the dentist or you experience anxiety about dental care, there's a solution for you. It's called **mild oral sedation**! By simply taking one or two pills before treatment, patients can safely sleep through their visits and have little or no memory of the procedure. Oral sedation is proven to be a very safe and effective method of helping our patients receive the dental care they need and want without the stress and anxiety often associated with dental visits. With the comfort of sedation, years of neglect or embarrassing problems can often be corrected in just a few visits.
