

Patient Instructions

Today

1 At the time specified by your skin care professional, wash the treated area using Anti-Redness Foaming Cleanser.

Some patients with more dry or sensitive eyes may experience redness, excess tear production, or other signs of eye irritation while the peel preparation is on the face or for a short time after its removal. Use of an appropriate lubricating eye drop, such as Refresh Plus®, available at most drugstores, is recommended to relieve such symptoms.

- 2 After gently patting skin dry, apply Intensive Recovery Complex
- 3 At bedtime, wipe one 3 Day Pad over face after cleansing with Anti-Redness Foaming Cleanser.

Tomorrow and next day

AM

- 4 Wash skin with Anti-Redness Foaming Cleanser
